

Ideas for India: Innovation Challenge 2026 Common Application form

Instructions:

- Each response field in the form has a specific word limit, and supporting files must not exceed 25 MB per file.
- The number of questions in the presentation should be limited to the outline provided – do not add any additional questions. If additional questions are added, then the same will be deleted to stick to the format and Management will not be held responsible in any manner
- The font type and size used to fill the presentation should be Calibri - Size 12

Section 1: Applicant details

Applicant or Team Member Name(s):	Thirupathi Arumugam
Institution/College/Company/Startup Name:	ShramSamriddhi Innovations
Project / Solution Title:	ShramSamriddhi (Empowering Everyone with Pension, Credit, and Care)
Target Audience*	Unorganized daily wage labourers (agricultural, construction and informal logistics workers) and verified local contractors/commercial enterprises
Key Markets / Regions Served (e.g., Cities / States / Countries): (Applicable only for Startups and Enterprises)	PAN-India (Focus on tier-2, tier-3, and rural agricultural/industrial labour hubs)
Estimated Implementation budget:	₹2,000,000 – ₹2,700,000 (MVP Development, Sandbox Integrations, and Grassroots Pilot Deployment)
Select Type (highlight as applicable) *	☐ Student ☐ Professor ☐ Academician ☒ Professional ☐ Entrepreneur ☐ Other (please specify): _____
Problem Statement Applied Under (Select One)*	Inclusive Innovation for Bharat Expanding healthcare access, digital learning, and financial inclusion to improve quality of life.
Select the Industry your Solution Primarily Targets: (highlight as applicable) *	☒ Agri-Tech & Food Processing ☐ Cybersecurity & Digital Public Infrastructure ☐ Education & Skilling ☐ Advanced Manufacturing & Industry ☐ Green & Renewable Energy ☐ Healthcare & Health Tech ☐ Waste Management & Circular Economy ☐ Water & Climate Resilience ☐ Supply Chain & Logistics Tech ☐ Urban Infrastructure & Mobility

**Ideas for India: Innovation Challenge 2026
Common Application form**

	☐ Other (please specify): _____
	Other suggested categories Inclusive Innovation for Bharat • Financial Inclusion, FinTech & Digital Payments • Assistive Technology & Accessibility Solutions • Social Impact & Community Development • Rural Development & Livelihood Enhancement • GovTech & Public Service Delivery
Annual Revenue (INR Crores) <i>(Applicable only if you have selected "Entrepreneur" under select type)</i>	☐ 2024 – 2025: _____ ☐ 2025 – 2026: _____

Commented [PD1]: Mohit, Eva, Ravi, Aakriti to recommend basis the problem statements

☒ I confirm that all applicant(s) are Indian nationals above 18 years of age (as on May 31, 2026).

Section: 2 – Case study details

Q.1. Describe the problem or challenge your solution seeks to address. Why is this problem important for India, and who is affected by it? (300 words limit)

India's unorganized workforce comprises over 400 million daily wage earners across agriculture, construction, and informal logistics. These workers face a double jeopardy: chronic income volatility and complete exclusion from formal financial safety nets. Existing welfare structures like EPF are designed exclusively for salaried employees with fixed monthly income slips.

The core pain points affecting this population include:

- **Income Volatility & Premium Inflexibility:** Daily wage earners cannot commit to rigid, monthly recurring pension or insurance premiums.
- **Information Asymmetry:** Millions miss out on government safety nets (e.g., PM-SYM, PMSBY) due to low digital literacy and complex paper-heavy application procedures.
- **Lack of Institutional Credit:** Unrecorded daily cash transactions leave workers without a verifiable financial footprint, locking them out of formal banking and exposing them to predatory local moneylenders.
- **Absence of Benefit Portability:** When seasonal agricultural labourers migrate to urban areas for construction work, they lose track of localized regional benefits. Solving this is vital for India's economic growth. Without automated safety nets, millions of informal workers risk slipping back into extreme poverty due to unexpected health crises, workplace injuries, or unassisted old age.

**Ideas for India: Innovation Challenge 2026
Common Application form**

Q.2. Describe your idea (e.g., design thinking approach, community-led model, product or process innovation, etc). Additionally, how is your idea different, more practical, or more inclusive than existing solution to strengthen India's position as a global manufacturing and innovation hub? (Max 300 words)

ShramSamriddhi is a dual-sided digital infrastructure that merges hyper-local job discovery with an automated, portable social security wallet.

- **Design Thinking & Voice-First Accessibility:** The mobile client features a simple regional voice-first UI tailored for low-literacy workers.
- **The "Invisible" Micro-EPF:** Every daily wage payout received through the app triggers an automated micro-deduction (e.g., 5%), seamlessly directed into long-term retirement accounts (NPS-Lite / PM-SYM).
- **Contractor Co-Contribution:** Enterprise employers and contractors pay a nominal sourcing fee that directly matches a portion of the worker's daily pension contribution, extending corporate-style benefits to informal labour.
- **Zero-Form AI Scheme Discovery:** An AI backend analyses e-KYC telemetry to auto-detect eligible state/central welfare schemes and prompts workers to activate cover via one-tap biometric verification.
- **Strengthening India's Hub Status:** ShramSamriddhi organizes informal labour markets, equipping enterprises with verified, ESG-compliant workforces while establishing cryptographic credit scores built on top of Digital Public Infrastructure (DPI).

Q.3. Explain how your solution contributes to the selected challenge theme. (Max 300 words)

a) If applying under Inclusive Innovation for Bharat:

How does your solution improve access, affordability, inclusion, or outcomes in healthcare, education, skilling, or financial inclusion?

Describe your solution and explain how it addresses the needs of underserved or marginalized communities, improves accessibility and user experience, promotes equitable access to services and opportunities, and delivers measurable social impact.

ShramSamriddhi addresses financial inclusion and public service delivery through systemic integration with India Stack:

- **Improving Access & Affordability:** The app is 100% free for workers. It converts large financial burdens into micro-transactions as small as ₹5 to ₹25 per day, making retirement savings and insurance universally accessible.
- **Proactive AI Welfare Activation:** Rather than requiring workers to visit physical government kiosks, our AI Welfare Radar cross-references user demographics (age, income, sector) against national schemes, triggering voice prompts in regional languages to activate instant coverage.
- **Portable Credit Footprint:** Daily job completions and micro-savings are logged on a transactional ledger, generating an alternative cryptographic credit score that unlocks low-interest formal micro-loans from partner banks.
- **Community-Led Trust Agents:** Onboarding is facilitated through local ecosystem anchors such as Farmer Producer Organizations (FPOs), village dairy cooperatives, and Self-Help Groups (SHGs) who serve as physical trust hubs

Q.4. Mention the current development stage of your solution. Also, is it tested or validated? (300 words limit)

Ideas for India: Innovation Challenge 2026
Common Application form

- Idea Stage
- Proof of concept
- **Functional Prototype**
- Simulation
- Pilot-Tested Solution
- Market-Ready

Briefly describe the same:

Brief Description: ShramSamriddhi has been built and verified as a functional prototype. The architecture comprises a Flutter cross-platform mobile client, Node.js/Python backend services, PostgreSQL relational database, and Redis caching.

Validation & Technical Readiness:

- **AI Engine Rule Validation:** The underlying **AI Scheme Discovery Engine** has been validated with test scenarios, accurately matching user profiles to schemes like PM-SYM, PMSBY, and PM-KISAN.
- **Sandbox API Integrations:** Tested using sandbox APIs for Aadhaar e-KYC paperless verification, DigiLocker certificate retrieval, and UPI 2.0 Auto-Pay micro-mandates.
- **Offline-First Resilience Test:** Verified an **Idempotent Asynchronous Sync Architecture**. When network connectivity drops in remote fields, transaction payloads are encrypted and biometrically signed on-device (SQLite/Hive). Android WorkManager background loops drain the queue deterministically via Idempotency Keys once network is restored, preventing lost funds or double deductions.

Q5. What is innovative about your solution?

Describe the key innovation(s) that make your solution unique. Innovation may be in the form of technology, product design, business model, process, delivery mechanism, partnerships, community engagement, or any other approach.

Please explain:

- What makes your solution different from existing alternatives?
- How does it address the identified problem more effectively, efficiently, affordably, or inclusively?
- What is the most novel aspect of your solution?

● **Differentiation from Existing Alternatives:** Traditional financial products demand fixed monthly payments and manual documentation. ShramSamriddhi introduces daily pay-as-you-earn micro-deductions directly linked to gig payouts.

● **More Effective & Inclusive Process:**

**Ideas for India: Innovation Challenge 2026
Common Application form**

Contractor Co-Contribution Model: Aligns corporate incentives by converting employer compliance into verified ESG scores, encouraging contractors to co-fund worker welfare.

Zero-Form AI Auto-Enrolment: Replaces paper filings with proactive, voice-guided biometric activations.

● **Most Novel Technical Aspect:** The combination of an **Offline-First Cryptographic Vault** with **Idempotent Gateway API Routing**. Workers operating in deep rural areas with zero cellular signal can safely complete micro-pension transactions offline; the platform guarantees zero-loss synchronization without risk of double-deductions.

Q.6. Briefly mention the exact outcome of your solution that aims to achieve:

Metrics	2026-27	2028-29	Unit / % Improvement
No. of beneficiaries served (monthly/yearly)	5,000	50,000	900% Growth
Cost Savings / Efficiency Improvement (%)	35%	60%	25% Increase in Wage Security
Jobs created	12,000	120,000	900% Increase
Environmental Impact	100% Paperless	100% Paperless	100% Digital e-KYC Execution
Revenue / Economic Value Generated	₹2,500,000	₹28,000,000	1020% Increase in Economic Value
Other Relevant Metric	₹1,500,000	₹18,000,000	1100% Increase in Retirement Assets and Micro-Pensions Formed
<i>Note - Please include only relevant metrics for your challenge</i>			

Q.6.1. Additionally, explain the most significant impact created or expected. (Max 150 words)

The most significant expected impact is the systematic conversion of volatile daily survival into compounding long-term wealth. Over 3 to 5 years of daily micro-payouts, an unorganized labourer accumulates an immutable record of thousands of verified gigs alongside a secure micro-pension balance co-funded by employers. This alternative credit score allows formal banks to issue low-interest micro-loans, breaking the worker's reliance on predatory local moneylenders and providing long-term financial security.

Q.7. Have you collaborated or partnered with any NGOs, government bodies, startups, corporates, or academic institutions, etc in supporting your solution? If yes, describe the nature of the collaboration and its contribution to the solution. (Max 300 words)

Yes, our operational strategy relies on partnerships across three primary ecosystem anchors:

● **Farmer Producer Organizations (FPOs) & Dairy Cooperatives:** Serving as regional onboarding partners, FPOs connect us directly to local agricultural labourers during harvest cycles.

Ideas for India: Innovation Challenge 2026 Common Application form

- **Local Self-Help Groups (SHGs) & Common Service Centres (CSCs):** Functioning as trust agents, these grassroots organizations assist digitally hesitant workers with initial e-KYC onboarding and biometric setups.

- **FinTech Gateway & Financial Partners:** Utilizing sandbox infrastructure from partners (e.g., Razorpay / Setu / Decentro) to route micro-deductions directly into regulated government fund architectures like NPS-Lite and PM-SYM.

Q.8. Explain the sustainability and scalability plan of the solution and mention the steps taken to make it inclusive and replicable in the future* (300 words limit)

- **Financial Sustainability (B2B Business Model):** The platform remains **100% free for labourers**.

Revenue is generated through:

1. Contractor Commission: A 1.5% to 3% sourcing fee paid by commercial builders and farms on bulk labour bookings.
2. Enterprise SaaS Subscription: Enterprise software providing attendance tools, automated payouts, and real-time labour welfare tracking that boosts corporate ESG ratings.
3. Financial API Partnerships: Processing payouts from micro-lending partners when workers qualify for formal loans.

- **Scalability & Replicability:** Designed for zero-hardware deployments, the mobile client operates efficiently on budget Android devices. By utilizing open India Stack APIs (Aadhaar, UPI, DigiLocker), the solution can scale across states without requiring local physical branches.

- **Inclusivity:** Supports regional language voice interfaces, text-to-speech feedback, and offline-first syncing for remote rural areas with spotty cellular coverage.

Q.9. Elevator pitch: Explain in a few lines why your idea deserves to be selected as a winner.

Highlight what makes it unique, impactful, and scalable. (300 words limit)

ShramSamriddhi bridges the gap between fragmented daily work opportunities and institutional financial security for India's 400 million unorganized daily wage earners.

While traditional banking models require fixed monthly paychecks, ShramSamriddhi adapts to income volatility through daily pay-as-you-earn micro-deductions and employer matching contributions. Built on India Stack with a regional voice-first UI and offline-first technical architecture, it operates smoothly even in remote agricultural regions with zero internet connectivity.

It is 100% free for workers, funded via B2B contractor sourcing fees and ESG compliance tools.

ShramSamriddhi converts daily wage survival into systematic compounding wealth, delivering scalable social impact for Bharath.

Section 3: Documents

Attach documents – Create a google drive link that is accessible to all and attached the same here

Documents to be attached in the google drive link:

- Concept-to-prototype execution plan deck
- Demonstration Evidence – if any (Attach a demo video link)
- Team Details and Profiles
- Any other supporting
